Clay&Code. Website

Website for **Clay&Code.**, a freelance web design and development brand.
Plain HTML, CSS and JavaScript. No build step and no frameworks.

Contact details used in the site

- Call: 9745083756
- WhatsApp: 8113911926
- Email: clayncodebranding@gmail.com

Features

- Dark and light theme (remembers the choice)
- Loading screen, interactive clay blob, typing line, scrolling text strip
- Scroll animations, animated counters, scroll progress bar
- Services, work gallery with filters, process, pricing with Websites/Web apps toggle, FAQ
- Contact form (Netlify Forms) plus WhatsApp and email options
- Animated footer, floating WhatsApp button, back-to-top button

- Installable PWA (Add to Home Screen) that also works offline
- SEO: meta tags, social preview image, sitemap, robots.txt, structured data

Files

```
index.html              Whole site (HTML, CSS,
JS)
manifest.webmanifest    PWA settings (name,
icons, colors)
sw.js                   Service worker (offline
support)
netlify.toml            Netlify headers
robots.txt              Search engine rules
sitemap.xml             Page list for Google
og-image.png            Preview image for link
sharing
icons/                  App icons
images/                 Work gallery images
```

Deploy on Netlify

1. Unzip the folder.
2. Go to app.netlify.com, then Add new site, then Deploy manually.
3. Drag the whole folder in (not just index.html).
4. Open Site configuration, then Forms, and make sure form detection is on. Redeploy if you turn it on.
5. In Forms, then Form notifications, add an email notification for clayncodebranding@gmail.com.

Common edits (all in index.html)

What	Where to look
Prices	Pricing section, `data-site` and `data-app` values
Phone numbers	Search `9745083756` (call) and `918113911926` (WhatsApp)
Email	Search `clayncodebranding@gmail.com`
Work images	Replace files in `images/` with your screenshots (same names, or update the `src` paths)
Stats	`data-n` values in the counters section
FAQ	FAQ section (also update the FAQ in the JSON-LD block in the head)
Brand blue	`--acc` in the CSS at the top

Updating after launch

- Redeploy by dragging the folder to Netlify again.
- If you change files, bump the version in `sw.js` (`cc-v1` to `cc-v2`) so phones load the new version.

SEO checklist

1. Replace `https://clayncode.netlify.app` with your real domain in `index.html`, `robots.txt` and `sitemap.xml` if it changes.
2. Add the site to Google Search Console and submit `sitemap.xml`.
3. Create a Google Business Profile.
4. Add real project screenshots and client reviews when you have them.

Notes

- Project cards, stats and prices are sample content. Replace them with real data.
- Fonts load from Google Fonts. Everything else is self-contained.
